BALLISTIC SHIELD

Ballistic shield against handgun bullets

The level IIIA Ballistic Shield is intended for protection against handgun bullets. It has been designed in conjunction with officers from various US forces to satisfy a need for a shield which is light and versatile, while being strong and robust. It offers increased head coverage against other shields. It is very adaptable when used in different tactical situations such as dynamic entry, hostage, domestic situations, routine patrol and casualty evacuation.

The standard shield has a solid horizontal handle combined with various soft handles for ease of deploying the shield. The integrated weapon mount provides for single handed operation, allowing operators to deploy their weapon without exposing their arm. The shield is ambidextrous, so that left-handed and right-handed operators can use the same shield quickly and without any need to change handle positions. Various signs/labels available (e.g., Police/Sheriff).

- ✓ Protection level IIIA according to NIJ
- ✓ Increased head coverage against other shields
- ✓ Integrated weapon mount
- ✓ Light and versatile while being strong and robust
- ✓ Comfortable to wear for right-handed and left-handed operators without any need for modifications
